Senior Care

Ti Clean is a service company that specializes in the application of Nano TiO₂ products. Our suppliers have made using TiO₂ practical, by using nano technology that provides catalytic oxidation under normal fluorescent lights as well as direct and indirect sunlight. They use binders that allow us to coat indoor and outdoor surfaces with excellent adhesion, wear resistance and no discoloration.

Testing at the U of A has shown the product to continue to kill bacteria 72 hours after treatment. The product actually remains effective for a year or more with one treatment. No disinfectant will provide continuous protection between cleanings. TiO₂ will greatly reduce the chance of bacteria, viruses or VOC's from harming your family.

TiO₂ is FDA approved as harmless to humans, and is used in many everyday products. Our product is used extensively in Japan and China and will become a very important anti-microbial here as awareness grows. MSDS sheets available.

UV LIGHT + TiO₂ = Photocatalytic Effect

What is TiO₂ ?

Titanium Dioxide is a type of photo catalyst, which is an environmental clean up material that becomes active when exposed to UV light.

In the presence of UV light, TiO₂ decomposes organic material in a process called oxidation.

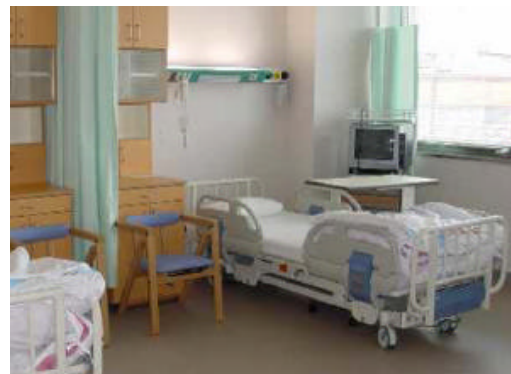

During this process TiO₂ emits charged molecules, which bond with harmful substances and convert them to harmless H₂O and CO₂.

Why Ti Clean ?

Let's face it, germs, odors and VOC's are everywhere! Most household cleaners are dangerous, minimally effective and do nothing for VOC's

Our treatment is different because once it is applied the "scrubbing" process begins, and continues for a year or more.

We spray TiO₂ directly on carpet, walls, curtains, counter tops, bathroom fixtures, glass and more. Light does the rest.

Some places look clean but are they really?

Modern manufacturing uses many solvents, glues, dye, and other VOC producing chemicals in their products. Many of these are harmful to you, your children and pets.

The TI Clean treatment is your best defense against these dangerous chemicals.

No other product provides this kind of protection and improved quality of life.

Our technicians will properly apply the TiO₂ to obtain the maximum benefits.

Treatments are quick with very little need to cover furniture or equipment.
