# Ti Clean A New Concept in Clean

Removes Odors and VOC's From Cars

## A Completely New Product for Removing Odors and Enhancing the Environment

- Ti Clean uses a unique TiO<sub>2</sub> product from Japan. TiO<sub>2</sub> is a photocatalyst which is not a cleaning solution, but a treatment that uses UV from the sun to convert organic compounds that create odors into harmless gas.
- Cigarette smoke is one of the toughest smells to remove from an automobile and greatly reduces resale value. Place a Ti Clean card in the front or rear window, with a few days of sunlight the smell will be eradicated. That Simple!
- TiO<sub>2</sub> or Titanium Oxide is an FDA approved substance that is used in many everyday products. Our supplier has made it practical to apply in the field with long lasting adhesion for deodorizing and anti-microbial applications
- We will provide a sample for you to evaluate. Once you experience the incredible difference you will be sold.
